(54) Title: **HEAT-EMITTING PATIENT GARMENT**

(57) **Abstract**: This invention relates to a patient garment comprising a front piece (1) and a back piece (2). According to the invention the front piece (1) is wholly or partially made up of an outer layer (3) of a material with little air permeability and an inner layer (4) of a material with a significantly higher air permeability than the outer layer, which extends over at least part of the outer layer (3) and is attached to the latter in such a way that a space is formed between the outer and inner layer. Furthermore, at least one inlet (8,9) connectable to a source of warm air is located on the front piece of the garment and leads to the space between the inner and outer layer.
